

Miscellaneous Exercise Question Bank

- 1. What are the products formed when an aqueous solution of magnesium bicarbonate is boiled?
 - (A) $MgCO_3$, H_2O , CO_2

(B) $Mg(HCO_3)_2$, H_2O

(C) $Mg(OH)_2$, H_2O,CO_2

(**D**) No change

- **2.** Which of the following statement is false :
 - (A) The milk of magnesia used as antacid is chemically MgO + MgCl₂
 - (B) Stability of alkali metal peroxides increases with increase in atomic number
 - (C) Hydration energy of AgF is higher than its lattice energy
 - (D) Anhydrous $MgCl_2$ cannot be prepared by direct heating of $MgCl_2 \cdot 6H_2O$

For Paragraph Q. 3 to 4

Alkali metal oxides are obtained by combustion of the metals. Although Na normally gives Na_2O_2 , it will take up further oxygen at elevated pressure and temperatures to form NaO_2 . The peroxides and superoxides of the heavier alkalies can also be prepared by passing stoichiometric amounts of oxygen into their solution in liquid ammonia. The different alkali metal oxides can be distinguished by reaction with water. The superoxides reacts with CO_2 and give oxygen gas. The stability of peroxides and superoxides is based upon the fact that larger cation can stabilise larger anion due to larger lattice energy.

Alkali metals dissolve in liquid ammonia. Dilute solutions are dark blue in colour but as the concentration increases above 3M, the colour changes to copper bronze and the solution acquires the metallic lustre due to the formation of metal ions clusters. The solution of alkali metals in liquid ammonia are good conductors of electricity due to the presence of ammoniated cations and ammoniated electrons. However, the conductivity decreases as the concentration increases, since ammoniated electrons and ammoniated cation associate.

- **3.** Ammoniated solutions of alkali metals are reducing agents due to the presence of free ammoniated or solvated electrons that can reduce :
 - (I) $O_2 \text{ to } O_2^{2-}$

(II) $K_2[Ni(CN)_4]$ to $K_4[Ni(CN)_4]$

(III) Aromatic ring

(IV) Non-terminal alkyne

Choose the correct code:

(A) III and IV

(B) II and III

(C) I, II, III and IV

- (**D**) I, III and IV
- **4.** KO₂ is used in oxygen cylinders in space and submarines because it:

- (A) Eliminates moisture
- **(B)** Absorbs CO₂ only
- (C) Absorbs CO_2 and increases O_2 content
- **(D)** Produces ozone
- **5.** Select the correct choice for alkali metal oxides.

- (A) Metal oxides react with water forming only metal hydroxides
- **(B)** Metal peroxides react with water forming metal hydroxides and H_2O_2
- (C) Metal superoxides react with water forming metal hydroxide, Hydrogen peroxide and O_2 gas
- **(D)** All of these

For Paragraph Q. 6 to 8

Be and Mg from amongst the p-block elements and most of the d-block elements give metallic or interstitial hydrides on reacting with hydrogen. The density of each compound is less than that of the metal itself and the properties are not much different from that of the metal. They give out hydrogen easily and are strong reducing agents. This suggests that hydrogen is present in the atomic state. These compounds are non-stoichiometric. The f-block elements (i.e., lanthanide and actinides) also form non-stoichiometric hydrides. These hydrides have lower densities than their respective metals. The metals of groups 7, 8 and 9 do not form hydrides. This region of the periodic table is called 'hydride gap'.

		J.	8.1											
6.	Which	type of hydrid	le is forme	ed by the eleme	nt having	atomic numb	er, $Z = 43$?	$lackbox{}$					
	(A)	metallic hyd	ride		(B)	Saline hydr								
	(C)	Covalent hyd	dride		(D)	No hydride								
7.	Which	n of the followin	ng has lea	st electrical cor	nductance	?			\odot					
	(A)	BeH_2	(B)	${\rm MgH_2}$	(C)	CaH_2	(D)	ZrH_2	_

	(A)	Sodium	(B)	Calcium	(C)	Magnesium	(D)	Potassium				

25 .	Cs ⁺ ior	ns give violet colo	our to fla	me. This is due	to the fa	ct that the emitt	ed radia	tions are of :				
	(A)	high energy			(B)	lower frequenci	es					
	(C)	longer wave-len	gths		(D)	zero wave numb	oer					
26.	The con	e compound(s) of alkaline earth metals which are amphoteric in nature is/are :										
	(A)	BaO	(B)	MgO	(C)	$\mathrm{Be}\big(\mathrm{OH}\big)_{\!2}$	(D)	${\rm Mg}({\rm OH})_2$				
27.	The hyd	droxide of alkali	ne earth	metal, which ha	as the lo	west value of so	lubility	product (K _{sp}) a	t normal			
	tempera	ature (25°C) is :										
	(A)	$\operatorname{Ca}\left(\operatorname{OH}\right)_{2}$	(B)	${\rm Mg}({\rm OH})_{\!2}$	(C)	$\mathrm{Sr}\left(\mathrm{OH}\right)_{2}$	(D)	$\mathrm{Be}(\mathrm{OH})_2$				
*28.	The correct statement is/are:											
	(A)	BeCl ₂ is a cova	dent con	pound								
	(B)	BeCl ₂ is an ele	ctron de	ficient molecule								
	(C)	BeCl ₂ can form	n dimer									
	(D)	the hybrid stat	e of Be i	n BeCl ₂ in polyi	meric for	m is sp ²						
29.	Which o	of the following o	arbonate	e of alkali metals	s has the	nas the least thermal stability ?						
	(A)	Li_2CO_3	(B)	K_2CO_3	(C)	$\mathrm{Cs_2CO_3}$	(D)	$\mathrm{Na_{2}CO_{3}}$				
30.	The alk	ali metals which	form no	rmal oxide, pero	oxide as v	well as super oxi	des are	:	\odot			
	(A)	Na, Li	(B)	K, Li	(C)	Li, Cs	(D)	K, Rb	Ü			
31.	Mg ₂ C ₂	$+ H_2O \longrightarrow X($	organic (compound) Cor	nound S	ζis∙			\odot			
01.	(A)	C_2H_2	(B)	CH ₄	(C)	propyne	(D)	ethene				
00				-	(-)	r	` ,					
32 .	The hydration energy of Mg^{2+} is: (A) more than that of Mg^{3+} ion (B) more than that of Na^{+} ion											
	(A) (C)	more than that	_		(B) (D)	more than that of Na $^{-1}$ ion						
33.	The dipole moment of H_2O_2 is more than that of H_2O but H_2O_2 is not a good solvent because: (A) It has a very high dielectric constant so that ionic compound cannot be dissolved in it											
	(A)				that ion	ic compound car	inot be d	lissolved in it				
	(B) (C)	It does not act a It acts as a redu										
	(D)		0 0		ising age	nt in chemical re	eactions					
34.			•			vents follows the						
	(A)	LiI > LiBr > LiC			(B)	LiF > LiI > LiBr			<u> </u>			
	(C)	LiCl > LiF > LiI	> LiBr		(D)	LiBr > LiCl > Li	F > LiI					
35.	CsBr_3	contains :							\odot			
	(A)	Cs – Br covalent bonds				Cs ³⁺ and Br ⁻	ions					
	(C)	$\mathrm{Cs^{+}}$ and $\mathrm{Br_{3}^{-}}$				Cs^{3+} and Br_3^{3-}	ions					
36.	The nu	mber and type of	f bonds b	oetween two carl	oon aton	ıs in calcium car	bide are	·:				
	(A)	one sigma, one	pi		(B)	one sigma, two	pi					
	(C)	two sigma, one pi				two sigma, two	pi					

*37.	Highly pure dilute solution of sodium in liquid ammonia :											
	(A)	shows blue	colouratio	n due to solvate	ed electro	ns						
	(B)	shows elect	rical condu	activity due to b	oth solva	ited electrons	as well as	solvated sodiu	m ions			
	(C)	shows red	colouration	due to solvated	l electron	s but a bad c	onductor of	felectricity				
	(D)	produces h	ydrogen ga	s or carbonate								
38.	The co	orrect order of	solubility	is:								
	(A)	CaCO ₃ < K	HCO ₃ < Na	HCO ₃	(B)	$KHCO_3 < 0$	CaCO ₃ < Na	$^{ m hHCO}_3$				
	(C)	NaHCO ₃ <	CaCO ₃ < K	CHCO_3	(D)	$CaCO_3 < N$	NaHCO ₃ < F	$ ext{CHCO}_3$				
39 .	The co	omplex format	tion tenden	icy of alkaline e	arth meta	als decreases	down the g	roup because	:			
	(A)	atomic size	increases									
	(B)	availability	of empty d	and f orbitals i	ncreases							
	(C)	nuclear cha	arge to volu	ıme ratio increa	ses							
	(D)	all the abov	ve .									
*40.	CuSC	$0_4 \cdot 5H_2O$ conf	tains :						\odot			
	(A)	ionic bond			(B)	hydrogen bond						
	(C)	covalent bo			(D)	dative bone						
41.	$Y \leftarrow$	<u>a, 205°C</u> CaS	$O_4 \cdot 2H_2O$ -	$\xrightarrow{\Delta, 120^{\circ}C} X.$	X and Y	are respective	ly:					
	(A)	plaster of p	aris, dead	burnt plaster	(B)	dead burnt	t plaster, pl	aster of paris				
	(C)	CaO and pl	aster of pa	ris	(D)	plaster of p	paris, mixtu	ire of gases				
42 .	A met	A metal M readily forms water soluble sulphate, and water insoluble hydroxide $M(OH)_2$. Its oxide MO is amphoteric, hard and have high melting point. The alkaline earth metal M must be:										
	amph	oteric, hard a	nd have hi	gh melting poin	t. The alk	aline earth m	etal M mus	st be :				
	(A)	Mg	(B)	Ве	(C)	Ca	(D)	Sr				
43 .	The co	The correct order of basic-strength of oxides of alkaline earth metals is :										
	(A)	BeO > MgC) > CaO > S	SrO	(B)	SrO > CaO	0 > MgO > B	eO				
	(C)	BeO > CaO	> MgO > S	SrO .	(D)	SrO > MgC	O > CaO > B	eO				
44.	Which	of the following	ing compou	ınds are param	agnetic iı	n nature ?						
	(A)	KO_2	(B)	K_2O_2	(C)	$\mathrm{Na_2O_2}$	(D)	PbO_2				
45 .	If X ar	nd Y are the s	econd ionis	sation potentials	s of alkal	i and alkaline	earth meta	als of same per	iod, then :			
	(A)	X > Y	(B)	X < Y	(C)	X = Y	(D)	Cannot be	predicted			
46 .	The a	queous soluti	ons of lith	ium salts are p	oor cond	luctor of elect	tricity rathe	er than other	alkali metals			
	becau											
	(A)	high ionisa			(B)	_	onegativity					
	(C)	lower ability of Li ⁺ ions to polarize water molecules										
	(D)	higher degr	ee of hydra	ation of Li ⁺ ions	8							
47 .	Which	of the follow	ing substar	nce(s) is/are use	ed in labo	oratory for dry	ing purpos	es?				
	(A)	NaCl			(B)	graphite						
	(C)	anhydrous	$CaCl_2$		(D)	Na_3PO_4						

*48.		The H-O-O bond angle and O-H bond lengths are 101.9° and 98.8 pm respectively in solid phase constead of 94.8° and 95 pm in gaseous phase of H_2O_2 . This indicates that the structure of H_2O_2 in solid										
				nt. This is due					2 - 2			
	(A)			en bonding								
	(B)	Intramolec	ular hydrog	en bonding								
	(C)	Van der Waal's bonding										
	(D)	All are true										
49.	The in	correct stater	ment(s) is/a	are:								
	(A)	Mg cannot form complexes										
	(B)	Be can form complexes due to a very small atomic size										
	(C)	the first ior	nisation pot	ential of Be is	higher tha	n that of Mg						
	(D)	Mg forms a	n alkaline l	nydroxide whi	le Be forms	amphoteric	oxides					
50.	(C) on 1	Calcium imide on hydrolysis gives gas (B) which on oxidation by bleaching powder gives gas (C), Gas (C) on reaction with magnesium give compound (D) which on hydrolysis gives again gas (B), Identify (B) (C) and (D).										
	(A)	NH_3, N_2, M_3			(B)	N_2 , NH_3 , N_3	_					
	(C)	N_2 , N_2O_5 ,	$Mg(NO_3)_2$		(D)	NH_3 , NO_2 ,	$Mg(NO_2)_2$					
51.	Which (A)	compound w Na ₂ O	vill liberate (B)	oxygen when $\mathrm{Cs}_2\mathrm{O}_2$	reacted with (C)	h water ? KO ₂	(D)	$\mathrm{Na_2O_2}$				
*52.	Identif	y the correct	statement(s) :								
	(A)	Sodium car	rbonate on	heating evolve	es carbon di	ioxide						
	(B)	Sodium nit	rate on hea	ting evolves n	itrogen dio	xide						
	(C)	Sodium hydroxide does not decompose on heating										
	(D)											
*53.	${ m NaHCO_3}$ and ${ m KHCO_3}$ belong to same category of compounds. Which of the following statements is/ar true :											
	(A)	NaHCO ₃ is	s less solub	le than KHCC) ₃ .							
	(B)	NaHCO ₃ l bonding in			drogen bo	nding where	as KHCO ₃	forms dimer	ic hydroger			
	(C)	Both can ex	xist indeper	ndently in soli	d state.							
	(D)	${ m K_2CO_3}$ can	n be prepar	ed by Solvay p	process sim	ilar to Na ₂ C	O ₃ .					
*54.	Which	of the follow	ing stateme	ents is/are tru	ie?							
	(A)	All alkali m	etals are so	oft and can be	cut with k	nife						
	(B)	Alkali meta	als do not o	ecur in free st	ate in natuı	re						
	(C)	Alkali meta	lls are highl	ly electroposit	ive							
	(D)	Alkali meta	l hydrides a	are covalent a	nd low melt	ting solids.						
*55.	Select	correct state	ments:						\odot			
	(A)	Beryllium a	and magnes	sium hydrides	are covaler	nt and polym	eric.					
	(B)	CaH ₂ , SrH ₂	$_2$ and BaH $_2$	are ionic.								
	(C)	Beryllium l	nydride con	tains 3c – 2e	bonds.							
	(D)	Ionic hydric	des react w	ith water form	ning hydrog	en.						

Gurukul	for IITJEE & Me	edical Preparation											
56.	Plaste	er of Paris harde	ens by :										
	(A)	giving off CC	0_2		(B)	utilising wat	er						
	(C)	changing int	o CaCO ₃		(D)	giving out wa	ater						
57 .		n one of the foll rom air) is pass	· ·				-	ur dioxide gas a	and oxyge				
	(A)	$\mathrm{Na_2SO_3}$	(B)	$SOCl_2$	(C)	NaHSO_3	(D)	${ m Na}_2{ m SO}_4$					
58.	$\mathrm{Na}_{2} \Big[$	$Be(OH)_4$ is for	rmed wh	en :									
	(A)	BeO reacts w	rith NaOl	H solution	(B)	$Be(OH)_2$ rea	acts with	NaOH solution					
	(C)	both (A) and	(B) are c	orrect	(D)	none of the a	orrect						
*59.	Sodiu	ım bicarbonate	can react	t with :									
	(A)	${ m Na_2SO_3}$	(B)	NaOH	(C)	NaH	(D)	HC1					
*60.	A sub	stance (P) relea	ses a gas	s (Q) on reactio	on with H ₂ 0	O. (Q) decolour	ises Br ₂	water. (P) may b	e : (
	(A)	BeC_2	(B)	$\mathrm{Be_2C}$	(C)	Al_4C_3	(D)	$\mathrm{Mg_2C_3}$					
61.	The p	roducts obtaine	ed on hea	nting LiNO ₃ ar	e:				\odot				
	(A)	$\text{Li}_2\text{O} + \text{NO}_2 +$	\cdot O_2		(B)	$\text{Li}_3\text{N} + \text{O}_2$							
	(C)	$Li_2O + NO + O$	O_2		(D)	$\mathrm{LiNO}_2 + \mathrm{O}_2$							
*62.	Which	Which of the following on thermal decomposition yields a basic as well as acidic oxide?											
	(A)	NaNO_3	(B)	$KClO_3$	(C)	$CaCO_3$	(D)	${\rm LiNO_3}$					
63.		n one of the followides?	llowing o	orders presents	s the corre	ct sequence of	the incre	easing basic na	ture of the				
	(A)	$Al_2O_3 < MgO_3$	O < Na ₂ O	< K ₂ O									
	(B)	$MgO < K_2O$	< Al ₂ O ₃ <	< Na ₂ O									
	(C)	$Na_2O < K_2O$	< MgO <	${\rm Al_2O_3}$									
	(D)	$K_2O < Na_2O$	$<$ Al_2O_3	< MgO									
64.	Which	n of the followin	g has ma	aximum ionisa	tion energy	?							
	(A)	$Ba \rightarrow Ba^{2+} +$	- 2e ⁻		(B)	$Be \rightarrow Be^{2+} +$	2e ⁻						
	(C)	$Ca \rightarrow Ca^{2+} +$	- 2e ⁻		(D)	$Mg \rightarrow Mg^{2+}$	+ 2e ⁻						

65. Select the incorrect statement:

(A) Solutions of alkali metals in liquid ammonia are good reducing agents because they contain free or solvated electron.

- (B) The crystalline salts of alkaline earth metals contain more water of crystallisation than the corresponding alkali metal salts.
- (C) Atoms of alkaline earth metals have smaller size and more nuclear charge than alkali metal atoms of same period.
- **(D)** All alkali metal halides form hydrates.

66.	Consider the following statements;													
	S_1 :	Among alkal	i metal ha	alides lithium	iodide is th	e most covale	nt in natur	e.						
	S_2 :	Potassium h	as greate	r photoelectric	work funct	ion than sodi	um.							
	S_3 :	The blue solution of alkali metals in liquid ammonia is stable at room temperature, where												
		ammonia is	still a liqu	iid, in the pres	sence of Fe.									
	S_4 :	The melting and boiling points of alkali metal halides always follow the trend :												
		chloride > fluoride > bromide > iodide.												
		and arrange	in the ord	der of true/fal	se.									
	(A)	TFFF	(B)	TTFF	(C)	ТГТТ	(D)	TTTF						
67.	Which	Which of the following liberates H_2 with cold water?												
	(A)	$\mathrm{H_2O_2}$	(B)	NaH	(C)	NaOH	(D)	Mg						
68.	When	ionic nitrides	react with	water, the pr	oducts are									
	(A)	acidic soluti	on and hy	drogen gas	(B)	acidic solut	ion and an	monia gas						
	(C)	basic solution	n and am	imonia gas	(D)	basic soluti	on and hyd	lrogen gas						
69.	Low s	plubility of CsI in water is due to :												
	(A)	smaller hyd	ration ent	halpy of Cs	(B)	smaller hydration enthalpy of I^{-}								
	(C)	lower lattice	enthalpy	of its two ions	(D)	(A) and (B) 1	both							
70 .	Bakin	g powder used	l to make	cake is a mi	xture of sta	rch, NaHCO ₃	and Ca($H_2PO_4)_2$. The	ne function of					
	Ca (H	$(_{2}PO_{4})_{2}$ is:												
	(A)	to slow down	n the relea	ase of CO ₂ ga	s									
	(B)	it has acidic	hydrogen	and gives CC	0_2 when mo	istened with	${ m NaHCO_3}$							
	(C)	to act as a filler												
	(D)	None of thes	se											
71.	Which of the following gives sodium hydroxide along with hydrogen gas on reaction with water?													
	(A)	Sodium oxid	le		(B)	Sodium amalgam								
	(C)	Sodium pero	oxide		(D)	Sodium car	bonate							
72 .	A doc	ctor by mistak	e adminis	sters a dilute	$Ba(NO_3)_2$	solution to	prevent ra	diographic i	nvestigations.					
		n of the follow	ing shoul	ld be best to	prevent th	e absorption	of soluble	barium an	d subsequent					
		m poisoning.												
	(A)	NaCl	(B)	Na_2SO_4	(C)	Na_2CO_3	(D)	NH ₄ Cl						
73.	Consi	der the followin	ng statem	ents:										
	S_1 :		_	sium are inert										
	S_2 :	Concentrate	d solution	ıs of alkaline e	earth metals	s in ammonia	are bronze	coloured.						
	S_3 :	Calcium, st	rontium	and barium	reacts wit	h cold wate	r forming	hydroxide	and librating					
		hydrogen ga												
	S_4 :						onic and m	ore basic tha	an that of the					
				nge in the ord										
	(A)	TTTT	(B)	TTTF	(C)	FTTF	(D)	FTFF						

*74.	Select	correct stateme	nt(s):											
	(A)	CaCO ₃ is mo	re solubl	e in a solution	of CO ₂ tl	nan in H ₂ O.								
	(B)	$\mathrm{Na_2CO_3}$ is co	nverted	to Na ₂ O and	CO_2 on he	eating.								
	(C)	${ m Li}_2{ m CO}_3$ is thermally unstable.												
	(D)	Presence of CaCl ₂ or CaSO ₄ in water causes temporary hardness.												
75 .	Crystals of washing soda lose nine molecules of water when exposed to dry air. This phenomenon is know													
	as:													
	(A)	dehydration	(B)	efflorescence	e (C)	deliquesc	ence (D)	evaporat	tion					
76 .	S_1 :	Plaster of paris is hemihydrate of calcium sulphate obtained by heating gypsum above 393 K.												
	S_2 :	Sodium carbonate is used in water softening.												
	S_3 :	The order	of mo	bilities of	the alka	ali metal	ions in	aqueous	solutions	is				
		$Li^+ > Na^+ > K^+ > Rb^+ > Cs^+$.												
	The co	orrect order of tr	ue/false	is:										
	(A)	TTF	(B)	TTT	(C)	FTF	(D)	FFF						
77.	Which	n of the following	stateme	nts is true for	all the alk	ali metals ?								
	(A)	Their nitrates	decompo	ose on heating	to give the	correspond	ding nitrites	and oxygen	1					
	(B)	Their chloride	s are del	iquescent and	crystallize	as hydrate	s							
	(C)	They react wit	h water	to form hydrox	cide and h	ydrogen								
	(D)	They readily r	eact with	halogens to f	orm ionic l	nalides, M ⁺	X^-							
78.	Sodiu	Sodium and potassium react with water much more vigorously than lithium because:												
	(A)	sodium and potassium have high values of hydration energy as compared to that of lithium												
	(B)	sodium and p	otassium	ı have higher ı	nelting po	nt than tha	t of lithium							
	(C)	sodium and p	otassiun	n have lower m	elting poir	it than that	of lithium							
	(D)	sodium and p	otassiun	n have lower h	ydration e	nergy than t	hat of lithiu	m						
79 .	Identi	fy the correct sta	atement :											
	(A)	Gypsum conta	ains a lov	ver percentage	of calciur	n than Plast	er of Paris							
	(B)	Gypsum is ob	tained by	y heating Plast	er of Paris									
	(C)	Plaster of Pari	s is obta	ined by hydrat	tion of gyp	sum								
	(D)	Plaster of Pari	s is obta	ined by partial	loxidation	of gypsum								
80.	Which	n of the following	does no	t participate ir	the Solva	y's process	for the man	ufacture of	Na ₂ CO ₃ ?					
	(A)	NH_3	(B)	H_2SO_4	(C)	CO_2	(D)	NaCl						
ACCER	TIONI O	DEASON												
<u> AJSER</u>	ATTON &	REASON												

The following questions consist of two statements one labelled ASSERTION (A) and the another labelled REASON (R). Select the correct answers to these questions from the codes given below:

- (A) Both Assertion and Reason are true and Reason is the correct explanation of Assertion.
- (B) Both Assertion and Reason are true but Reason is not correct explanation of Assertion
- (C) Assertion is true but Reason is false
- **(D)** Assertion is false but Reason is true

81. Assertion: Lithium is the weakest reducing agent among the alkali metals.

Reason: In alkali metals, ionization energy decreases down the group.

82. Assertion : Cesium is used in photoelectric cells.

Reason: Cesium is the most electropositive element.

83. Assertion: Superoxides of alkali metals are paramagentic.

Reason: Superoxides contain the ion O_2^- which has one unpaired electron.

84. Assertion: Beryllium does not impart any characteristic colour to the Bunsen flame.

Reason: Due to its very high ionization energy, beryllium requires a large amount of energy for

excitation of the electrons.

85. Assertion : Diagonal relationship is shown between Be and Al.

Reason: Ionization potential of Be is almost the same as that of Al.

86. Assertion : Beryllium halides dissolve in organic solvents.

Reason: Beryllium halides are ionic in character.

87. **Assertion:** BeCl₂ fumes in most air.

Reason: Be Cl_2 reacts with moisture to form HCl gas.

88. Assertion : $MgCO_3$ is soluble in water when a current of CO_2 is passed.

Reason: The solubility of $MgCO_3$ is due to the formation of $Mg(HCO_3)_2$.

89. Assertion: When CO₂ is passed through lime water, it first turns milky and then the solution

becomes clear when the passage of ${\rm CO}_2$ is continued.

Reason: The milkiness is due to the formation of insoluble $CaCO_3$ which then changes to soluble

 $Ca(HCO_3)_2$ when excess of CO_2 is present.

90. Assertion: H_2O_2 is not stored in bottles made of glass.

Reason: Alkali oxides present in glass catalyse the decomposition of H_2O_2 .

91. Assertion: H_2O_2 has bleaching action.

Reason: The bleaching action of H_2O_2 is due to the nascent oxygen, which is liberated on

decomposition. $H_2O_2 \longrightarrow H_2O + [O]$

92. Assertion: H_2O_2 is a non linear molecule with open book structure.

Reason: In H_2O_2 each oxygen undergoes sp^3 hybridisation, and each oxygen has angular

geometry.

93. Dilute solutions of alkali metals in liquid ammonia are good conductors of electricity? What happens

when temperature is increased?

94. 6 milli mole of pure gypsum is heated to convert it completely to Plaster of Paris. What is the number of

milli moles of steam evolved in the process?

95. On heating in excess supply of air, K, Rb and Cs form superoxides rather than oxides and peroxides.

Explain.

96. How many of the following form polymeric chains ? $BeCl_2,\,AlCl_3,\,NaHCO_3,\,Li_2CO_3,\,BeH_2,\,Na_2CO_3$

 $\textbf{97.} \qquad \text{How many of the following heated metals will absorb } \ N_2 \ \text{gas} \ ?$

Li, K, Rb, Cs, Mg, Ca, Sr

- 98. How many of the following bicarbonates are solid in nature ? LiHCO3, NaHCO3, KHCO3, RbHCO3, CsHCO3, Be(HCO3)2, Mg(HCO3)2, Ca(HCO3)2, Sr(HCO3)2, Ba(HCO3)2
- **99.** Find the number of metal which gives hydrogen gas on reacting with HCl. Zn, Na, K, Cu, Ag, Au
- **100.** Match Column-I with Column-II and Choose the correct answer from the code given below:

	Column-I	Column-II			
1.	NaNO ₃	(p)	Baking soda		
2.	Na ₂ B ₄ O ₇ · 10H ₂ O	(q)	Chile salt petre		
3.	NaHCO ₃	(r)	Borax		
4.	Na ₂ CO ₃ ·10H ₂ O	(s)	Washing soda		

Codes:

	1	2	3	4		1	2	3	4
(A)	p	q	r	s	(B)	q	r	p	s
(C)	r	р	q	s	(D)	s	р	q	r
